

**Dental Prophy/Cleaning Admitting Form**

Date \_\_\_\_\_ Patient \_\_\_\_\_

**Medical History**

Has your pet been on his/her antibiotics prior to this procedure?  Yes  No

Are your pet's vaccinations current?  Yes  No

Did your pet eat this morning?  Yes  No

Has your pet recently experienced vomiting, coughing, sneezing, or diarrhea?  Yes  No

Is your pet allergic to any drugs?  Yes  No

If yes, list drugs \_\_\_\_\_

Is your pet taking any medications?  Yes  No

If yes, list medications \_\_\_\_\_

Do you want us to check other problems or concerns?  Yes  No

If yes, list problems/concerns \_\_\_\_\_

Do you use any dental hygiene products on your pet (i.e. tooth paste or mouth rinse)?

Yes  No

If yes, list products \_\_\_\_\_

**Consent to perform extractions and necessary procedures**

During the anesthesia and dental cleaning, a doctor will carefully evaluate all teeth of your pet's mouth. Some teeth may need to be extracted due to severe loosening, decay, or dental disease. Extractions are \$7.00 per tooth. Sometimes, when a large tooth or a tooth with a longer or larger root is extracted, the hole/cavity (alveolus) connecting to the jaw bone may need to be sealed. This procedure consists of the doctor packing the area with a bone graft-like material where the tooth was pulled and suturing the gum line. This protects the jaw bone from weakening or decaying over time which may lead to fractures and/or subsequent dental problems. The minimum for this procedure is \$35.00 per alveolus.

Perform any necessary extractions at this time.

Perform any other necessary dental procedures at this time  
(Circle any and all that apply)

- Extractions plus packing alveolus and suturing gum line
- Removing a dental epilus (benign mass in the mouth along the gum line)
- Examining a mass or tumor in the mouth and taking an aspirate to look at under the microscope
- Biopsy a mass or other type of lesion in the mouth
